(1) Rated input speed.

(2) Maximum Input Speed.

(3) T_{2N} value is calculated at n_{1N} , continuous duty cycle, uniform operation, $KA=1$ and unlimited theoretical life time as per ISO-6336 (NL>N00 in the Woehler line). The application factor KA according to DIN-3990-1 must be considered for each duty cycle and machine type.

(4) T_{2Max} only for very short time intervals.

(5) Up to 1000 times during the gearbox's lifetime.

(6) F_{RMax} for gearboxes with flange and hollow output shaft

(7) F_{RMax} for gearboxes without flanges and with solid output shaft

(8) Varies depending on input.

Input Modules

To simplify input module selection, Servotak uses modular input blocks. Each gearbox size and family combination has a interface code, that lets you quickly determine which input modules can be installed. Input modules are shared between R, F and K gearboxes. A is the diameter of the interface flange for that gearbox.

Servomotor Flanges

Since servomotors, unlike IEC motors, don't have standard dimensions, it is necessary to know the exact dimensions of the servomotor to ascertain the correct input flange for it. Input flanges are often custom made for the customer's order, which allows Servotak to provide flanges for basically every servomotor. The structure of the reference for the servomotor input flange is detailed at the end of this document, Order References chapter.
